question 1.jsp

<0/0

```
String username = request.getParameter(  
    "username");
```

```
String password = request.getParameter(  
    "password");
```

```
try {
```

```
    Class.forName("com.mysql.jdbc.Driver");
```

```
    Connection conn = DriverManager.
```

```
        getConnection("localhost", "root", "pass");
```

```
    PreparedStatement st = conn.prepareStatement
```

```
        ("select username from userdata
```

```
        where username = ?");
```

Ayush Rawat

```
st.setString(1, username);  
int i = statement.executeUpdate();  
System.out.println("Welcome " + username);  
}  
catch (Exception e)  
{  
    System.out.print(e);  
}
